Summary

Software engineering student focused on backend systems, databases, and cloud infrastructure. **Django core contributor** and **OCI DevOps Professional** certified, with production experience in data pipelines and containerized deployments.

Skills

Languages	Python, Java, JavaScript/TypeScript
Frameworks	Django, FastAPI, React, Next.js, NestJS
Tools & Practices	Git, Docker, Kubernetes, OCI, PostgreSQL, Redis, Airflow, Linux, CI/CD

Certifications

Oracle Cloud Infrastructure DevOps Professional | **Meta Back-End Developer Professional Certificate (Coursera)**

Experience

Software Engineer Intern, Full-Stack & Data Jul 2026 – Sep 2026
Dowency *Remote*

- Built and shipped a **production Django + React** platform that ingests Meta, TikTok, and AppsFlyer data and generates reports in an automated weekly run, cutting report preparation from **5+ hours to zero manual effort.**
- Designed an extensible data pipeline using **hexagonal architecture** and **Python/Polars** to clean and join cross-platform data for **5 regional report types**; deployed with **Docker** and CI/CD.
- Implemented a **daily production monitoring job** that applies three ad-set-relative spend and CAC rules to flag underperforming ads; a single run flagged **47 ads**, including 13 that spent ∼**$6K in 7 days** with zero or inefficient conversions.
- Automated data ingestion and report delivery with **Airflow** and **PostgreSQL**; surfaced a live campaign that should have been paused, enabling the team to stop unnecessary ad spend.
- Developed an **OpenAI API-powered ad-copy validation tool** to detect and correct spelling and grammar errors across advertising content, reducing manual copy-review work.

Software Engineer Intern Jun 2025 – Aug 2025
Dowency *Remote*

- Built a data collection backend processing **10,000+ records/day** with **Airflow**, deployed through CI for high availability.
- Designed **FastAPI** REST services over a **PostgreSQL** database, serving as the data layer for internal tools.

Open Source

Django 2026
github.com/django/django/pull/21558

- Diagnosed and fixed a `ValueError` in `FileBasedCache.touch()` caused by expired cache keys; fix reviewed and merged into Django's main codebase.

Projects

Competitor Price Monitor
Python, asyncio, Redis Streams, Polars, PostgreSQL, S3, Docker

- Async pipeline tracking price and stock across **50,000+ SKU URLs every 15 minutes**, using per-domain rate limiting and Redis Streams consumer groups for reliable work distribution.
- Micro-batch price-delta alerting in Polars; current state in PostgreSQL, history as partitioned Parquet on S3.

Collaborative Real-Time Code Editor
Next.js, NestJS, TypeScript, Socket.IO, Redis, Docker

- Multi-user editor with WebSocket sync and persistence; **Redis Pub/Sub** state distribution for **sub-100ms sync** between concurrent users.

Education

Faculty of Sciences and Technologies, Errachidia Sep 2024 – Jun 2027 (Expected)
Engineering Degree, Software Engineering and Artificial Intelligence *Morocco*

Faculty of Sciences and Technologies, Errachidia Sep 2021 – Jul 2024
B.Sc. in Science and Technology, Software Engineering *Morocco*

Leadership

Head of Problem Solving Cell & Coding Cell 2023 – 2026
FST Errachidia University Clubs

- Led two technical cells; taught **DSA**, problem solving, and **Python** to 30+ students through weekly sessions and contests.

Achievements

- **3rd Prize, Huawei ICT Competition, Global Stage (China, 2025):** represented Morocco in DevOps and cloud.
- **2nd Place, Mobile Health Digi-Hackathon (2025):** shipped a healthcare mobile app under time pressure.
- **Competitive Programming:** 29th/60, Moroccan National Programming Contest (2024); 9th/25, Hassania IT (2024).
